

Cloud Native Applications and Microservices

Cloud Native enables cost savings, on demand scalability and the support of high availability systems

Problem/Challenge

Traditional application development consisted of developing one large core containing all the domain logic, communicating within a single server process sharing one database

What questions are we answering?

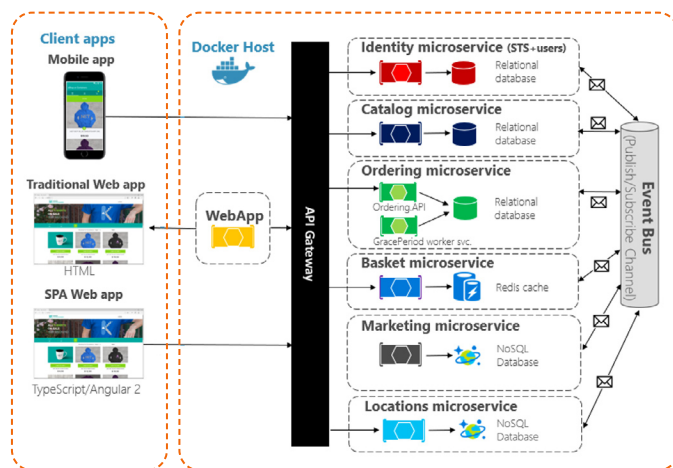

- How do I create an application that we are able to independently test, deploy and release without out the fear of breaking everything?
- What architectural patterns are suitable for each application?
- What cloud services can I use to improve time to market?

Our Approach

- truData will work with your business to gather a holistic view of your organization and align with the capabilities provided by Cloud Native.
- We will develop an architecture for each of your microservices and applications.
- truData will get your Minimum Viable Product to market faster with our Agile and DevOps approach.

Tools Involved

- Azure/AWS, Kubernetes, SQL, NoSQL, Event Bus, SPA, Mobile Apps

Business Benefit

- Cost Savings
- On demand scalability
- Able to support High Availability Systems

truData Overview

truData is an industry leading cloud professional services company, focused on application modernization, innovations and integrations. We have established several key strategic channel partnerships with MS Azure, AWS, Google Cloud Platform, Snowflake and SAP.

truData's partners with clients in the delivery of strategy and roadmap, project implementation, application managed services and staff augmentation capabilities.

- 10+** Years of Cloud Experience
- 20+** Years of Analytics and Data Warehousing Experience
- 150+** Data Scientists and Engineers

Our multi-shore model offers several options, including **truData's** nearshore capability that provides 0800hrs–1700hrs coverage at an improved price point without sacrificing quality of delivery. This is realized through **truData's** Central and South America operations.

Strategic Partnerships

truData's strategic partnerships complement our cloud modernization services and allow us to deliver multi-faceted programs to solve your most critical business needs.

Our Capabilities

- Data and Analytics
- Data Management and Governance
- Integration
- Application Modernization
- Integration Platform as a Service (iPaaS)
- Cloud Native
